B2C tự phục vụ / PLG đề xuất · 09/10/2026 · Đoàn Quang Thanh · 2A202602841

NORTH STAR · Weekly On-Time Important Task Completions: task important do student capture, xác nhận complete trước/đúng hạn trong academic week; chỉ tính transition non-completed→completed đã persist đúng user/task, bỏ duplicate/save fail/click/login/AI plan delivery. Hiện tại: CHƯA ĐO · mục tiêu chưa phê duyệt.

[TB] North Star bands: after four positive eligible teaching-week baselines for the same fixed cohort (≥10 eligible students/week, QA≥95%): GREEN ≥4-week median; YELLOW ≥80% and <100%; RED <80%. Zero baseline or changed workload/cohort = CHƯA ĐO/reset.

ĐÈN ĐIỀU HÀNH · metric hiện tại đều CHƯA ĐO

TIER / METRIC	XANH	VÀNG	ĐỎ	NGUỒN · ĐỊNH NGHĨA / CỬA SỔ · BÁO TRƯỚC
LEADING · Eligible-week W4 retention	≥30%	≥15% and <30%	<15%	[TB] Per first-completion cohort; W4 = 4th eligible teaching week; n≥10 with actionable work and complete W4. W2→W4 is diagnostic only. Day22 proposed 30% gate; 15% provisional.
LEADING · 7-day first-value Activation	≥40%	25–<40%	<25%	[TB] First task→persisted completion in 7 days; n≥10 per cohort. One cohort is exploratory; compare two before product change. D60 n=10 is a feasibility check; 7d is Day20 hypothesis.
LEADING · Upcoming-task readiness	≥80%	60–<80%	<60%	[TB] Captured due tasks with valid due date + actionable context; ≥30 tasks/week ×2. Predicts activation/NSM (hypothesis).
OPERATING · Priority-plan adoption-to-value	≥50%	25–<50%	<25%	[TB] Presented tasks later completed on time; ≥20 eligible tasks/week ×2, due date elapsed. Predicts NSM; not AI quality.
OPERATING · All-in direct cost / paid-seat request	$≤0.3992	>$0.3992–$0.4990	>$0.4990	[MH]+[TB] USD per paid request, ≥30 paid-seat attempts + reconciled cost. $0.499 all-in 60% GM ceiling at proposed $4.99/four requests, no restored credits; infra-only ceiling $0.47536. Free/promo costs separate.
LAGGING · CAC / net-new paid student account	≤$9.349056	>$9.349056–$11.68632	>$11.68632	[MH]+[TB] $11.68632 modeled 3-month cap at $4.99/78.0649% GM; recalc to 3× observed gross contribution if lower. ≥10 net-new accounts. CAC numerator: tagged media, channel/affiliate fees, creative/agency + loaded acquisition labor; denominator: unique first-time accounts with positive net charge after proposed 30-day refund window. First tagged qualified touch in proposed 30 days before charge; exclude free/trial/test/full refunds, report reactivations separately. Usage credits are COGS; discounts/refunds reduce payback contribution, not CAC spend; promo credits add COGS. CHƯA ĐO.
LAGGING · Paid-seat GM	≥70%	60–<70%	<60%	[MH]+[TB] 60% model floor; ≥10 complete paid seat-months. 78.0649% is modeled, not actual.

Missing/zero denominator, immature cohort or incomplete attribution = CHƯA ĐO (not green/red). Retention cohorts enter at first valid academic_task_completed; semester breaks and no-actionable-task weeks are excluded, not churn.

5 LUẬT · DRAFTS CẦN SINH VIÊN TỰ VIẾT LẠI

1. [STOP] If W4 <15% in each of 2 consecutive mature cohorts (n≥10 with actionable work and full W4 each): freeze paid-acquisition launch; run 5 first-task→completion sessions next week. Do not buy ads to offset churn or count taskless weeks as churn.	2. [STOP] If Activation <25% in 2 consecutive cohorts (n≥10 each, full 7d follow-up, QA≥95%): pause paywall, replace the onboarding step with the highest failure count in the two cohort logs, and run 10 task-flow sessions. Do not discount to hide first-value failure.	3. [STOP] If paid-seat cost >$0.499/request (proposed $4.99/four-request terms) at monthly close (≥30 paid requests, reconciled costs): freeze allowance expansion; cap test build at 4. Do not call modeled $0.27364 actual.
4. If readiness <60% for 2 academic weeks (≥30 due tasks/week, QA≥95%): add due-date/context validation next sprint. Do not infer missing deadlines with AI.	5. [STOP] If CAC per net-new account exceeds the lower of $11.68632 modeled full-price cap and 3× observed monthly gross contribution, in a closed first-paid cohort (≥10 net-new accounts; spend/attribution/refunds complete): freeze paid launch; next week run a tagged organic/referral test capped at 10 participants; log cash spend and attributed labor. No transactions = NO-GO. Do not scale from $7.50 stretch.	Economic guard: CAC ≤ the lower of $11.68632/account and 3× observed monthly gross contribution/account; approved billing required before paid scale. Synthetic validator pass ≠ model/user success.

CỔNG 30/60/90 · MỖI CỔNG MỘT METRIC

GATE	1 METRIC · NGƯỠNG · NGÀY	EVIDENCE · DECISION
D30 Learning	[TB] ≥8/12 interviewed students report recurring weekly overlapping-deadline pain + show workaround · 08/11/2026	12 consented anonymized interview notes + coding rubric. Pass: continue discovery; fail: rewrite problem/ICP hypothesis. [TB]; no revenue gate.
D60 Operating	7-day Activation ≥40%, n≥10, full follow-up · 08/12/2026	Event export, cohort query, ≥95% QA log. Pass: start bounded retention cohort; fail/low n: FIX workflow/instrumentation, no paid scale. [TB] exploratory, not stable performance.
D90 Viability	[TB]/Day22 proposed W4 retention ≥30% in one mature cohort, n≥10 eligible with actionable work · 07/01/2027	Cohort table + eligibility audit + QA. Pass: capped checkout/CAC test only after price approval. Fail with mature cohort: one FIX by 14/01 and post-fix cohort by 21/01; low n/immature: CHƯA ĐO, fix measurement, no KILL or paid scale.

KILL (draft; D135, not D90): D90 W4 below 30% triggers one FIX shipped by 14/01/2027 and distinct cohort recruitment by 21/01/2027. On 21/02/2027, stop B2C positioning only if post-fix W4 <10% for ≥10 eligible users, four complete eligible academic weeks and event QA≥95%. At 10–<30% pivot; at ≥30% one tagged checkout test capped at 50 qualified visits after price approval. Immature follow-up = CHƯA ĐO, defer KILL. CHƯA ĐO ĐƯỢC: no verified users/interviews, paid seats, CAC, retention, provider/hosting invoices, p95, free-tier cost, WTP or runway. $4.99, 4 credits, R=85%, $0.27364/credit, 78.0649% GM are estimates/proposals. Price/credit/failure terms unapproved. Dashboard/rules/gates are AI-assisted drafts; student must rewrite/sign off.

PHỤ LỤC · KIỂM TOÁN NGƯỠNG [MH]

Giá trị đầu vào lấy từ workbook Day22; đây là mô hình/giả thuyết, không phải hiệu quả kinh doanh quan sát.

[MH] 1 · TRẦN CAC TỪ PAYBACK 3 THÁNG

Đầu vào / phép tính	Kết quả và diễn giải
ARPU đề xuất = $4.99/paid seat-month Direct cost estimate = 4 × $0.27364 = $1.09456/month GM = ($4.99 − $1.09456) / $4.99 = 0.7806492986 = 78.06492986% Payback giới hạn = 3 tháng (policy hypothesis)	Gross contribution/month = $4.99 × 0.7806492986 = $3.89544 Max CAC = $3.89544 × 3 = $11.68632 / net-new paid student account (one seat/account) XANH ≤$9.349056 · VÀNG >$9.349056–$11.68632 · ĐỎ >$11.68632 Green/yellow split = 20% buffer, policy [TB]. CAC cap is conditional on full-price modeled contribution; rederive if actual net price/COGS is lower. CAC = CHƯA ĐO.

[MH] 2 · TRẦN DIRECT COST / CREDIT CHO GM ≥60%

Đầu vào / phép tính	Kết quả và diễn giải
Subscription = $4.99/month; allowance = 4 credits (proposal) Maximum direct cost/seat-month = $4.99 × (1 − 0.60) = $1.996 All-in direct cost ceiling/credit = $1.996 / 4 = $0.499 Non-infrastructure = API $0.008 + retry tokens $0.00064 + QA $0.015 = $0.02364	Infrastructure-only ceiling = $0.499 − $0.02364 = $0.47536/credit Modeled current total cost = $0.27364/credit (not an invoice). XANH all-in ≤$0.3992 · VÀNG >$0.3992–$0.499 · ĐỎ >$0.499 $0.3992 = 20% buffer [TB]. Recompute if terms change. Do not substitute $0.47536 infra-only for $0.499 all-in.

[MH] 3 · GM ALERT BANDS

60% is the selected model viability floor; 70% green boundary is a 10 percentage-point operating buffer, not a benchmark. XANH GM ≥70% · VÀNG 60%≤GM<70% · ĐỎ GM<60%. Formula: (recognized subscription revenue − attributable direct cost) / recognized revenue. Workbook excludes overhead; GM is not net profit.

Workbook trace: `2_Pricing!B19:B21, B29:B35, B53`; `4_Channel_Fit!B5:B9`; `1_Cost_Job!B15:B22, B41, B46:B56, B62:B67`.

B2C definitions and event semantics: Day20 Metrics Pack (activation, retention, five-event tracking contract). Day22 synthetic 100/100 validator pass is offline structural validation only; it is not model quality or user success.

All acquisition and financial bands are policy/model-derived thresholds. No [BM] external benchmark is used. Student must personally verify and rewrite the calculations, buffers, operating rules and gates before submission.
